Mixers are known in which the reagents are measured
out (dosed) from the container through siphons. The
special feature of this mixer consists in the fact that
parallel with the container with other components there
is mounted a vessel with a float and air nozzle which
are executed by movement along the top (up and down
movement--translator). (Extracted)

Dielectric properties

Experiments indicated that an increase of polarity does not have a favorable effect on the course of the acid-base reaction since the reagents react strongly with the solvent molecules. A considerable increase of proton-donor and proton-acceptor properties of the solvent can, however, lead to ionization. This is (Chemistry--Physical, TT, v. 7, no. 4) (over)
